How to install ngrok on RPI

1. Open a terminal into your remote Raspberry Pi device.

2. Download the latest ngrok binary for your Linux distribution. You can find the correct binary on our ngrok download page: Select your operating system, select the version, and copy the link that appears in the Download button. Below is an example for ARM64:

   wget https://bin.equinox.io/c/bNyj1mQVY4c/ngrok-v3-stable-linux-arm64.tgz

3. Unzip the downloaded file and move it to a directory in your PATH. Below is an example for /usr/local/bin:

   sudo tar xvzf ./ngrok-v3-stable-linux-arm64.tgz -C /usr/local/bin

4. Now that you have installed ngrok on your Raspberry Pi device, link it to your ngrok account by using your authtoken:

   ngrok authtoken NGROK_AUTHTOKEN

   NOTE: based on current account setup (11/16/2023): Following is the free link to test things

   https://pegasus-calm-externally.ngrok-free.app/
